CUSTOMER JOURNEY MAP

Project: Global Fuel Prices Analysis | SkillVallet / SmartBridge

Date	31 January 2026	**Team ID**	To be filled by student/team
Project Name	Global Fuel Prices Analysis	**Maximum Marks**	2 Marks

Purpose: This map shows how a user moves from identifying a fuel-price question to exploring the Tableau dashboards and using the findings.

Phase of Journey	STAGE 1 Discover the Question	STAGE 2 Explore the Dashboard	STAGE 3 Use the Insights
Actions ***What does the user do?***	• Identifies a need to compare fuel prices across countries. • Looks for price and tax information. • Opens the project or Tableau Public story.	• Selects the relevant dashboard: Policy, Logistics, or Research. • Reviews charts and comparisons. • Compares countries, petrol prices, taxes, and crude-oil trends.	• Interprets the patterns shown in the charts. • Uses findings to support a policy, logistics, or research decision. • Shares or revisits the dashboard when needed.
Touchpoints ***What does the user interact with?***	• Tableau Public story link. • Project introduction and dataset description. • Fuel-price questions or business needs.	• Policy dashboard. • Logistics dashboard. • Research dashboard and visualizations.	• Dashboard charts and comparisons. • Summary findings and trends. • Shared Tableau link or project report.
Customer Thought ***What is the user thinking?***	• “Where are fuel prices highest or lowest?” • “Can I compare countries using one source?”	• “What patterns can I see in prices and taxes?” • “Which information is relevant to my role?”	• “What do these trends mean for my decision?” • “Can I explain this finding clearly?”
Customer Feeling ***How does the user feel?***	Curious, but may feel unsure where to find reliable comparisons.	Interested and more confident when charts are clear; may feel confused if a chart is crowded.	Informed and confident when the findings are easy to understand and explain.
Process Ownership ***Who leads this stage?***	Project analyst prepares the dataset, defines the questions, and publishes the Tableau story.	The user explores the dashboards; the project analyst is responsible for clear labels, filters, and visual design.	Policy makers, logistics users, or researchers interpret the insights for their own needs; the analyst supports with clear documentation.
Opportunities ***How can we improve this stage?***	• Explain the purpose and data coverage clearly. • Provide a simple introduction and source notes.	• Use clear titles, legends, and consistent units. • Make comparisons easy to scan. • Keep each dashboard focused on its intended user.	• Add concise takeaways and limitations. • Make the Tableau story easy to share. • Explain how insights may support decisions without overstating conclusions.

Note: The project contains three Tableau dashboards designed for policy, logistics, and research users, using global fuel-price data across countries and years. Fill in your actual Team ID before submission.
