Project Design Phase-I
Problem – Solution Fit Template

Date	19 September 2022
Team ID	Vidhya Jain
Project Name	Global Fuel Prices Analysis
Maximum Marks	2 Marks

Problem – Solution Fit Template:

The Problem-Solution Fit simply means that you have found a problem with your customer and that the solution you have realized for it actually solves the customer's problem. It helps entrepreneurs, marketers and corporate innovators identify behavioral patterns and recognize what would work and why.

Purpose:

- Solve complex problems in a way that fits the state of your customers.
- Succeed faster and increase your solution adoption by tapping into existing mediums and channels of behavior.
- Sharpen your communication and marketing strategy with the right triggers and messaging.
- Increase touch-points with your company by finding the right problem-behavior fit and building trust by solving frequent annoyances, or urgent or costly problems.
- **Understand the existing situation in order to improve it for your target group.**

Template (filled for Global Fuel Prices Analysis):

1. CUSTOMER SEGMENT(S) CS

- Students and data analysts studying global energy and economic trends
- Business analysts and logistics / transport companies tracking fuel cost
- Researchers and policy makers comparing countries
- Travellers and general public interested in fuel prices

6. CUSTOMER CONSTRAINTS CC

- Fuel price data is scattered across many websites in different units and currencies
- Limited time and little technical skill for data cleaning
- Static tables and reports make country comparison hard
- Cannot afford costly paid data tools

5. AVAILABLE SOLUTIONS AS

- Websites with static price lists and Excel sheets (pros: easy access; cons: no trends, no interactivity)
- Manual comparison using spreadsheets (cons: slow and error-prone)
- News articles with limited country coverage

2. JOBS-TO-BE-DONE / PROBLEMS J&P

- Compare petrol and diesel prices across countries and regions
- Find the most and least expensive countries
- Understand price trends over time
- Get quick, reliable insights in one place

9. PROBLEM ROOT CAUSE RC

- No single, clean and interactive view of global fuel prices
- Raw data has missing values, mixed units and inconsistent country names
- Fuel prices change with oil prices, taxes, subsidies and currency, so data goes out of date fast

7. BEHAVIOUR BE

- Search different websites and copy numbers into Excel by hand
- Rely on rough estimates or news headlines
- Ask friends or colleagues for comparisons
- Spend a lot of time on data collection instead of analysis

3. TRIGGERS TR

- News about rising or falling petrol and diesel prices
- Need to plan travel, transport budget or a study / project report

4. EMOTIONS: BEFORE / AFTER EM

- Before: confused, frustrated, worried about rising costs
- After: confident and in control, with clear data to decide

10. YOUR SOLUTION SL

- An interactive Tableau dashboard on global fuel prices built from cleaned data
- World map, trend lines, top/bottom country charts and KPI cards
- Filters for country, region, fuel type and year to compare countries easily
- Published on Tableau Public so anyone can open it with a link, and refreshed when new data arrives

8.1. ONLINE CH

- Searches on Google and fuel price websites
- Reading news portals and social media posts about fuel prices
- Use Tableau Public / shared links, and learning platforms or forums

8.2. OFFLINE CH

- Discussing with classmates, colleagues and team members
- Printed reports, presentations and project reviews with mentors
